# COVID-19 RAPID TEST KIT

- Manufactured in Germany to the highest specification
- Screen anywhere
- Clinical sensitivity 96.88%
- Results within 10 minutes
- Ideal workplace screening tool
- Identifies infection even in mild cases
- Easy to use
- Suitable for all ages
- Can inform your COVID-19 risk assessment

Health & Safety Solutions

Manufactured in Germany, with its well-established expertise in diagnostics and bio medics, is leading the way in the quality of these tests.

Currently only available to be supplied to businesses customers.

## What is the Coronavirus?

Coronaviruses are enveloped RNA viruses that are distributed broadly among humans and that cause respiratory, enteric, hepatic, and neurologic diseases.

IgM antibody to 2019 Novel Coronavirus can be detected within 7 days (it is acknowledge this could be as early as 5 days), the IgM antibody indicates that you may have been infected and that your immune system has started responding to the virus (i.e. you may currently have the infection).

IgG antibody can be detected within 14 days, IgG antibodies indicate that you may have had COVID-19 in the past and have developed antibodies. The combination of both antibodies IgM and IgG can be detected within 14-21 days after infection. IgG remains positive, but the antibody level drops overtime.

MEDsan COVID-19 IgM/IgG Rapid Test is a solid phase immunochromatographic assay for

## IF YOU TEST POSITIVE

- You must immediately self-isolate to prevent spreading the virus to others.
- You should then contact the NHS on 111 who will advise you on the next steps to take.

MEDsan COVID-19 IgM/IgG Rapid Test is a solid phase immunochromatographic assay for the rapid, qualitative and differential detection of IgM and IgG antibodies against novel coronavirus SARS-CoV-2 infected cells in human whole blood, serum or plasma. This test provides only a preliminary test result.

## Why test?

Antibodies against SARS-CoV 2 infected cells are formed approximately 4-10 days after infection

Therefore, antibodies may be detected even for asymptomatic patients

IgM is always the first antibody to be formed in increased amounts at the beginning of an infection

The antibody IgG is only formed more frequently in the course of the infection

## Test Results

### IgM Positive

Test indicates the presence of IgM anti-Covid-19 in the patient. The result is IgM positive. Self-isolate and repeat test in 7 days. You should then Contact the NHS on 111 who will advise you on the next steps to take

### IgG Positive

Test indicates the presence of IgG anti Covid-19 in the patient. The result is IgG positive. Past infection confirmed if the patient has now fully recovered. Inform GP practice to document in notes for tracing purposes.

### IgM and IgG Positive

Test indicates for the presence of IgM and IgG anti-Covid-19 in the patient. Definite infection, however, if you show no symptoms it is an indicator you have/had the infection and are recovering.

MEDsan UK's rapid antibody test is manufactured in Germany by SanPharma – a well-respected business producing diagnostics and medical devices for over 40 years. The laboratory has demonstrated a sensitivity of more than 96% and specificity of 100%.
